Lot 3 - Développements

MNGT To CM-GN Interface

Version 6

Message Header

- Bit 0: vendor/extended msg flag (E)
 - Used to indicate that a custom message format is used
 - For vendor specific extension capabilities
- Bit 1: Validity flag (used to indicate of non-existent data)
- Version information (4 bits)
- Priority (Optional, 3bits)
- Event Type (8 bits)
- Event Subtype (8 bits)

Location

Location Update

- Update Position Event sent from MGMT component to GN
- Carries node's position vector
- All position vector fields are described in 102 636-4-1
 - Timestamp (ms) = Timestamp(UET)mod2^32

| | | | (|) | | | | | | | | 1 | | | | | | | | 2 | | | | | | | 3 | 3 | | | |

Location Table Request

- Queries the location table for the position vector of a node, given by its GN_Addr
- Query location event generates a Update Location Event.
 - All Location Table can be requested by setting a GN_ADDR with all bytes set to 0xFF

| | | | (|) | | | | | | | 1 | 1 | | | | | | | 2 | 2 | | | | | | | 3 | 3 | | | |

Configuration

Configuration Available Event

- Used to notify clients of ITS MGMT of
 - available configurations
 - configuration changed
- Key count indicates the amount of configuration keys available for this client (server always provides this info, but client can ignore this field if this info is not required)

| | | | (|) | | | | | | | : | 1 | | | | | | | 2 | 2 | | | | | | | 3 | 3 | | | |
|----------|---|---|---|---|------|------|---|-----|------|----|---|---|---|---|---|-----|-----|-------|----------|------|-------|---|---|-----|-----|------|------|---|---|---|---|
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

| Reserved | | | | | | | | | | | | | | | | | ŀ | Key c | ount | (opt | ional |) | | | | | | | | | |

Configuration Request

- Used to request MGMT to initiate transmission of a configuration
 - Request single key: continuous transmission mode and conf-id
 - Request all configuration groups: OxFFFF as conf-id
 - Request NET layer configuration group: 0xAAAA as conf-id
 - Request FAC layer configuration group: 0xBBBB as conf-id
- Transmission mode flag:
 - 0 for continuous transmission mode: each key is wrapped in its own msg, default
 - 1 for bulk mode: all-in-1 data blob (a single big message containing all keys)

| | | | | (|) | | | | | | | : | 1 | | | | | | | 2 | 2 | | | | | | | 3 | 3 | | | |

| | Conf ID | | | | | | | | | | | | | | | | | | | | trası | missi | on m | ode | | | | | | | | |

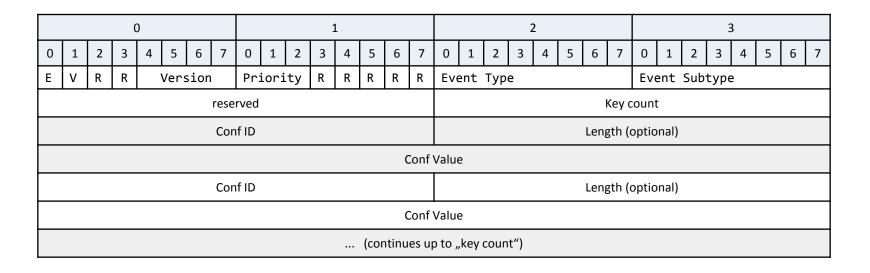

Configuration Response Continous

- Used to set configuration parameters
- ConfID is mapped to name of configuration parameter
- Encoding of ConfValue determined by Conf-ID, default: integer
- Size of ConfValue is indicated in Length
 - Field: Length (bytes 6+7) -> is mandatory. Length indicates DWORD-length of "Conf Value", e.g. Length=2 means Conf Value is actually 8 bytes long.
- "continuous transmission" mode

Network State Event

- Periodically generated information about the status of the network layer
- Default every 10 seconds, used as a heartbeat. The timer can be set by appropriate configuration value
- ToUpperLayerPackets all packets send to GNBTPAPI
- Discarded packets (duplicate, error in header, verification failed, etc)
- Timestamp (ms) = Timestamp(UET) mod 2³²
